STEPHENS, JACQUELINE F

ART UNIT	PAPER NUMBER
----------	--------------

3761

DATE MAILED: 12/01/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/939,535	Applicant(s) HOLMES ET AL. 	
	Examiner Jacqueline F Stephens	Art Unit 3761	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 30 August 2004.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,2,4,6,9-12,14-20,26-33,35-43,57,58,60-65,68-70,72-77 and 80 is/are pending in the application.
 4a) Of the above claim(s) 1,2,4,6,9-12,14-20,27-33 and 35-42 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 26,43,57,58,60-65,68-70, 72-77, and 80 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION***Response to Arguments***

1. Applicant's arguments filed 8/30/04 have been fully considered but they are not persuasive. Regarding the rejection of claims 26, 43, 57-58, 60-63, 68, 70, and 72-77 under 35 U.S.C. §102(b), applicant argues the terms drum-formed and airlaid, while being directed to a process of making the article, result in a product with distinctive properties distinguishable from other materials, and thus are not the same as or obvious from other types of materials made according to other methods. However, both the prior art and the claimed invention ends up containing a bonded material and a cohesive layer, as to applicant's definition of airlaid and drum-formed webs, respectively (specification page 8, lines 6-11 and page 9, lines 1-4; see Everett page 20, line 26 through page 21, line 10 where Everett discloses a cohesive and uniform layer of cellulose fibers and superabsorbent particles; and page 30, line 30 through page 31, line 10 where Everett discloses a bonded web). The process of making the product does not appear to change the end product, thus applicant has the burden of providing evidence establishing an unobvious difference between the claimed product and the prior art product. "The lack of physical description in a product-by-process claim makes determination of the patentability of the claim more difficult, since in spite of the fact that the claim may recite only process limitations, it is the patentability of the product claimed and not of the recited process steps which must be established. We are therefore of the opinion that when the prior art discloses a product which reasonably appears to be either identical with or only slightly different than a product claimed in a product-by-

Art Unit: 3761

process claim, a rejection based alternatively on either section 102 or section 103 of the statute is eminently fair and acceptable. As a practical matter, the Patent Office is not equipped to manufacture products by the myriad of processes put before it and then obtain prior art products and make physical comparisons therewith." *In re Brown*, 459 F.2d 531, 535, 173 USPQ 685, 688 (CCPA 1972). MPEP 21113.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 26, 43, 57-58, 60-63, 68, 70, and 72-77 are rejected under 35 U.S.C. 102(b) as being anticipated by Everett et al. WO 99/17695.

As to claim 26, Everett discloses an absorbent material comprising: an upper layer 48 including pulp fluff and superabsorbent material and a lower layer 50 including pulp fluff and superabsorbent material (page 20, line 26 through page 21, line 24); wherein the absorbent material has a thickness in a range of between 0.5 and 7.5 mm (page 13, lines 9-12), and an absorbent capacity between about 14 and 40 grams 0.9 w/v% saline solution per gram of absorbent material (page 23, lines 11-19), and the lower layer has a greater density than the upper layer (page 21, lines 10-24; page 78, line 6-9 and page 80, lines 3-5. Everett discloses the upper layer comprises between 20 and 75wt%, which includes a component of the range of between 10 and 80%

Art Unit: 3761

superabsorbent (page 78, lines 15-16). As to the limitations of the upper layer being drum -formed and the lower layer being air laid, these limitations are directed to a process of making the article. "Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985) (citations omitted). MPEP 2113.

As to claim 57, Everett discloses an upper layer of density 0.03 g/cm^3 - $.4 \text{ g/cm}^3$ (page 78, lines 7-8). Everett discloses the lower layer has a density of not less than about 0.1 g/cm^3 and not more than about 0.3 g/cm^3 (page 80, lines 3-4).

As to claim 58, Everett discloses the upper layer comprises between 20 and 75wt%, which includes the range of between 20 and 70% superabsorbent (page 78, lines 15-16).

As to claim 60, see page 13, lines 9-12.

Art Unit: 3761

As to claim 61, Everett discloses the absorbent material has an absorbent capacity of at least 16 grams w/v% saline solution per gram of absorbent material (page 23, lines 11-19).

As to claim 62, Everett discloses two or more layers (page 25, lines 34-35).

As to claims 63, Everett discloses a plurality of layers on the upper layer (page 79, claim 12).

As to claim 68, Everett discloses various forms of the absorbent article, see page 6, lines 16-25 directed toward an intended use of the article.

As to claim 43, Everett discloses an absorbent garment comprising: a chassis defining a waist opening and first and second leg openings: the chassis including a liquid-permeable body side liner, an absorbent assembly, and a substantially liquid-impermeable outer cover layer (page 15, lines 9-18). Everett discloses an absorbent material comprising: an upper layer 48 including pulp fluff and superabsorbent material and a lower layer 50 including pulp fluff and superabsorbent material (page 20, line 26 through page 21, line 24); wherein the absorbent material has a thickness in a range of between 0.5 and 7.5 mm (page 13, lines 9-12), and an absorbent capacity between about 14 and 40 grams w/v% saline solution per gram of absorbent material (page 23, lines 11-19), and the lower layer has a greater density than the upper layer (page 21, lines 10-24; page 78, line 6-9 and page 80, lines 3-5). The limitations of the upper layer

Art Unit: 3761

being drum -formed and the lower layer being air laid are directed to a process of making the article. "Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985) (citations omitted). MPEP 2113.

As to claim 69, Everett discloses an upper layer of density 0.03 g/cm^3 - $.4 \text{ g/cm}^3$ (page 78, lines 7-8). Everett discloses the lower layer has a density of not less than about 0.1 g/cm^3 and not more than about 0.3 g/cm^3 (page 80, lines 3-4).

As to claim 70, Everett discloses the upper layer comprises between 20 and 75wt%, which includes the range of between 20 and 70% superabsorbent (page 78, lines 15-16). Everett discloses the upper layer comprises between 20 and 75wt%, which includes a component of the range of between 10 and 80% superabsorbent (page 78, lines 15-16).

As to claim 72, see page 13, lines 9-12.

As to claim 73, Everett discloses the absorbent material has an absorbent

Art Unit: 3761

capacity of at least 16 grams 0.9 w/v% saline solution per gram of absorbent material (page 23, lines 11-19).

As to claim 74, Everett discloses two or more layers (page 25, lines 34-35).

As to claims 75 and 76, the limitations of the upper layer being drum -formed and the lower layer being air laid are directed to a process of making the article. "Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985) (citations omitted). MPEP 2113.

As to claims 77, Everett discloses a plurality of layers on the upper layer (page 79, claim 12).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claim 64 is rejected under 35 U.S.C. 103(a) as being unpatentable over Everett in view of Weisman USPN 4673402. Everett discloses the present invention substantially as claimed. However, Everett does not disclose the upper layer has a bottom surface area greater than a surface area of the top surface of the lower layer. Weisman discloses a dual-layered core article with the upper layer 103 having a bottom surface area greater than a surface area of the top surface of the lower layer for the benefit of separating the areas which might hold discharged urine and feces to reduce diaper rash caused by skin contact with urine-feces mixtures (col. 3, lines 17-24). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the lower layer of Everett to have be a smaller component as compared to the upper layer for the benefits disclosed in Weisman.

7. Claims 65 and 80 are rejected under 35 U.S.C. 103(a) as being unpatentable over Everett in view of Burgeni USPN 3494362. Everett discloses the present invention

Art Unit: 3761

substantially as claimed. However, Everett does not disclose the lower layer is discontinuous. Burgeni discloses an absorbent article having a multi-layered absorbent with a discontinuous lower layer in the sense that the lower layer is corrugated, for the benefit of providing increased capillarity, increased fluid retentivity, and increased structural stability to the fibrous core, particularly in the transverse direction (col. 2, lines 18-39). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the lower layer to be discontinuous for the benefits disclosed in Burgeni.

Conclusion

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

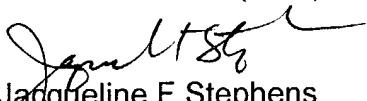

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
